Chairs' Welcome

Welcome to the Eighth World Conference on Structural Control and Monitoring (8WCSCM) in Orlando, the City Beautiful.

The University of Central Florida (UCF) in collaboration with the U.S. Panel of the International Association for Structural Control and Monitoring (IASCM) are the organizers of the international conference. The host organization is the International Association for Structural Control and Monitoring (IASCM) which has the main objective of promoting international cooperation in the fields of structural control and monitoring by organizing conferences and workshops. The international conferences have been hosted every four years by the International Association for Structural Control and Monitoring (IASCM) since 1994. The preceding conferences have been held in Pasadena - USA (1994), Kyoto - Japan (1998), Como - Italy (2002), La Jolla - USA (2006), Tokyo - Japan (2010), Barcelona – Spain (2014), and Qingdao - China (2018). These world conferences have encompassed all aspects of structural control and monitoring for a variety of civil, mechanical, aerospace and energy systems. Subjects that have been discussed at these conferences over the years include smart sensing technologies, algorithms for damage detection, parameter identification and model topics such as updating, theories for condition assessment, safety evaluation and reliability analysis, structural control devices and systems, hybrid simulation and various testing technology, control algorithms, integration techniques of structural health monitoring systems, structural monitoring and control systems, and the practice of structural monitoring and control techniques for different applications.

The 8WCSCM will also cover all major related topics, including smart control and sensing devices; smart and multi-functioning materials; important infrastructures, such as bridges, buildings, tunnels, road and rail structures; wind, earthquake and multi-hazards issues; Bayesian inference and uncertainty quantification; life-cycle assessment; machine-learning and computer-vision applications; artificial intelligence, digital twins; smart cities, smart tourism and resilient communities; recent research advances; and more. The program has 8 keynotes from prominent researchers from 7 different countries and 4 continents, 39 breakout sessions with several special sessions organized by experts, several technical sessions in thematic areas (252 papers from 41 countries and 5 continents), and 2 mini-symposia with contributors from academia, industry, and government.

The full technical submissions will be compiled for publication as Springer Proceedings papers within the Book series as International Conference Proceedings Series: the 8th World Conference on Structural Control and Monitoring (8WCSCM). The extended abstracts will be made available to the major indexing services such as Web of Science, Scopus, Google Scholar. The Springer Conference Proceedings papers will be published soon after 8WCSCM.

Since 2019, our world has been shocked by COVID19 pandemic. The effects of the global pandemic have been observed in anything we do and how we carry out our lives. As one of the most prominent confer-

ences in the interdisciplinary field of structural control and monitoring, we decided to create opportunities to meet in person and virtually to exchange ideas to contribute to the body of knowledge with our novel work even during the global pandemic. The 8WCSCM will be held as a hybrid conference in its almost 30-year history. This hybrid conference will bring participants flexibility from distance, time, medical and financial limitations. The conference has a rich past and diverse participations from all around the world. The collective objective is to provide novel technical solutions for smart and resilient systems in a sustainable society in today's technologically fast-paced world with many other issues such as health, sustainability, economic hardships, conflicts, and social justice.

We also would like you to enjoy one of the tourism centers of the world. As the nation's #1 visitors' destination, on-site participants have numerous choices of lodging, resorts, and restaurants in and around the City of Orlando. Disney World, Universal Studios, and many other theme parks are conveniently located near the conference venue. Orlando has been awarded two Smart Cities awards and is currently pursuing a variety of additional projects for Smart Cities initiatives that would assist citizens and visitors. The Florida High Tech Corridor is a technology rich region known for space technologies and other high-tech clusters of innovation, such as modeling and simulation, optics and photonics, digital media, and medical technologies. NASA Kennedy Space Center, SpaceX, and Blue Origin are just about 50 miles away from the UCF Main Campus.

We thank you for joining us to explore solutions to engineering problems in the interdisciplinary field of Structural Control and Monitoring.

On behalf of the IASCM and the conference organizing committee, we warmly welcome you to the 8WCSCM.

Dr. Hae-Bum "Andrew" Yun
Chair of 8WCSCM, 2022
Associate Professor of
Civil, Environmental & Construction Engineering,
University of Central Florida

Dr. F. Necati Catbas
Chair of 8WCSCM, 2022
Lockheed Martin St. Laurent Professor
Civil, Environmental & Construction Engineering,
University of Central Florida

Orlando, Florida
June 2022

International Association for Structural Control & Monitoring (IASCM) Advisory Board

Hui Li (President)	Harbin Institute of Technology (China)
Andrew W. Smyth (Incoming President)	Columbia University (U.S.A.)
Sami F. Masri (Secretary General)	University of Southern California (U.S.A.)
Eleni Chazi	ETH Zurich (Switzerland)
Yozo Fujino	Josai University (Japan)
Esayas Gebreyohannes	Addis Ababa University (Ethiopia)
Akira Igarashi	Kyoto University (Japan)
Yoshiki Ikeda	Kyoto University (Japan)
Lukas Jankowski	IPPT PAN (Poland)
Ho-Kyung Kim	Seoul National University (South Korea)
Chan Ghee Koh	National University of Singapore (Singapore)
Michael Krommer	Johannes Kepler University Linz (Austria)
Jerome P. Lynch	Duke University (U.S.A.)
Yi-Qing Ni	Hong Kong Polytechnic University (Hong Kong)
Akira Nishitani	Waseda University (Japan)
José Rodellar	Technical University of Catalonia (Spain)
Bijan Samali	Western Sydney University (Australia)
Gopalakrishnan Srinivasan	Indian Institute of Science (India)
David Wagg	University of Sheffield (U.K.)
Daniele Zonta	University of Trento (Italy)

**Date:**

June 5, 2022 (Sunday) - June 8, 2022 (Wednesday)

**Venue:**

The 8WCSCM will be hosted on UCF Rosen College of Hospitality Management campus (Rosen campus). The campus is located approximately 30 miles from the UCF main campus and conveniently set in the heart of Orlando's tourism district, placing world-renown industry organizations and businesses within minutes of the specially-designed, resort-style campus.

Tel.: +1(407) 823-0176

Email.: secretariat@8wcscm.org

Address: UCF Rosen College of Hospitality Management.
9907 Universal Blvd, Orlando, FL 32819

**Weather:**

In Orlando, Florida, in June, the average temperature ranges is 23.4°C to 31.8°C

**Language:**

The official language is English. Simultaneous interpretation is available for opening ceremony, keynote sessions and closing ceremony.

Registration Desk Opens

Date	Time	Location
June 5, 2022	10:00 am - 19:00 pm	UCF Rosen College of Hospitality Management Campus
June 6, 2022	8:00 am - 19:00 pm	
June 7, 2022	8:00 am - 19:00 pm	
June 8, 2022	8:00 am - 19:00 pm	

Wifi Name: UCF_Guest (without password)
Instructions: If you are a guest, you should connect to "UCF_Guest" for wireless service. Once you are connected on the "UCF_Guest" network open a web browser, read UCF's Acceptable Use policy and click accept at the bottom of the page.

Lunch

Date: June 6 & 7, 2022
Time: 12:15 - 13:00 pm
Location: UCF Rosen College of
Hospitality Management campus
Room 124

Welcoming Reception

Date: June 6, 2022
Time: 18:30pm- 20:00 pm
Location: UCF Rosen College of
Hospitality Management campus
Room 126

Date: June 7, 2022

Time: 6:30 pm - 8:30 pm
Location: UCF Rosen College of
Hospitality Management campus
Room 124

In-person & Virtual presentations:

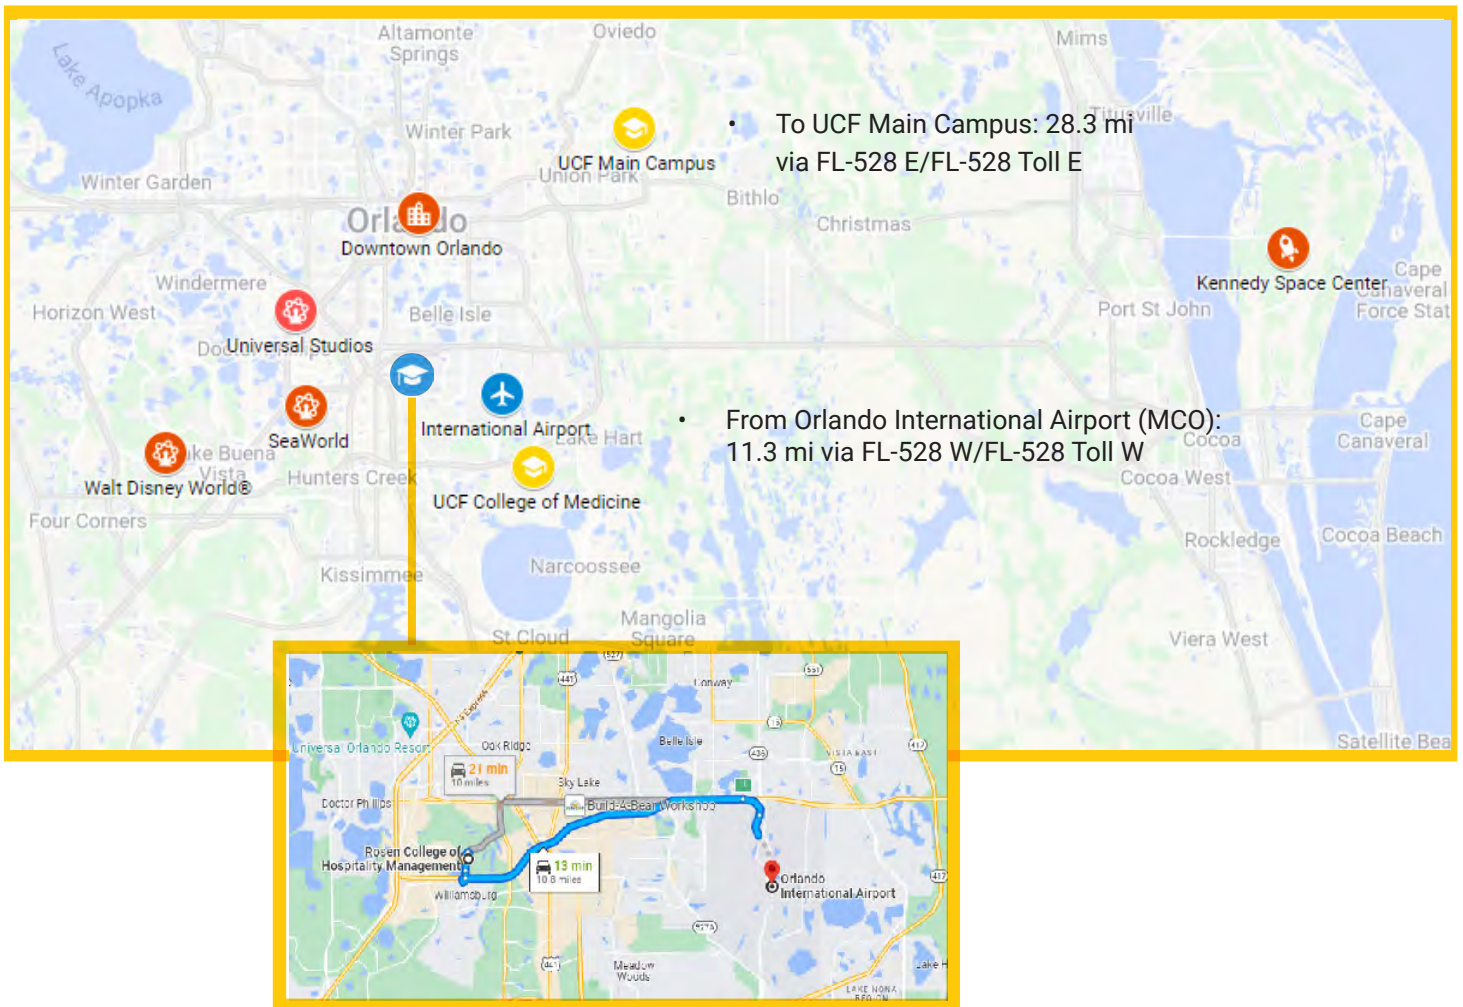

As a hybrid conference, we ask all virtual participants to upload max 15-min pre-recorded presentations to the website by May 27 (Fri). Live presentations will not be accepted to minimize technical problems due to a presenter's local network condition. During the session, your pre-recorded presentation will be played, and you can answer questions from audiences synchronously at the end of your presentation.

Orlando Attractions

The City of Orlando is full of attractions, both touristically and technically

The 8WCSCM will be hosted on UCF Rosen College of Hospitality Management campus (Rosen campus). The campus is located approximately 30 miles from the UCF main campus and conveniently set in the heart of Orlando's tourism district, placing world-renown industry organizations and businesses within minutes of the specially-designed, resort-style campus. The distances to popular local attractions are:

The campus has an auditorium for 400 people, courtyard for 500 people, board meeting rooms, many AV-equipped classrooms for parallel technical sessions, computer labs for technical tutorial and demo, dining rooms, beer & wind labs, etc. Thus, the venue can facilitate technical meetings, dining, and social events in one place.

You can find various lodging options, including many award winning Orlando hotels and family/vacation hotels. For more details, please check the hotel list in Lodging. It is highly recommended to reserve your room(s) due to the popularity of the area by many tourists.

- **To Kennedy Space Center:** 11 mi via FL-528 E/FL-528 Toll E

The John F. Kennedy Space Center is located on Merritt Island, Florida. It is one of the ten field centers of National Aeronautics and Space Administration's (NASA).

- **To Key West:** 385.5 mi via US-1 S and Florida's Turnpike

The Seven Mile Bridge is a bridge in the Florida Keys. It connects Knight's Key (part of the city of Marathon, Florida) in the Middle Keys to Little Duck Key in the Lower Keys.

- **To Orlando Downtown:** 14.4 mi via I-4 E

Downtown Orlando is the historic core and central business district of Orlando, Florida.

- **To Universal Studio:** 7.4 mi via I-4

Universal Orlando consists of two theme parks (Universal Studios Florida and Universal's Islands of Adventure), an on-site waterpark (Volcano Bay), and an on-site entertainment district (Universal CityWalk).

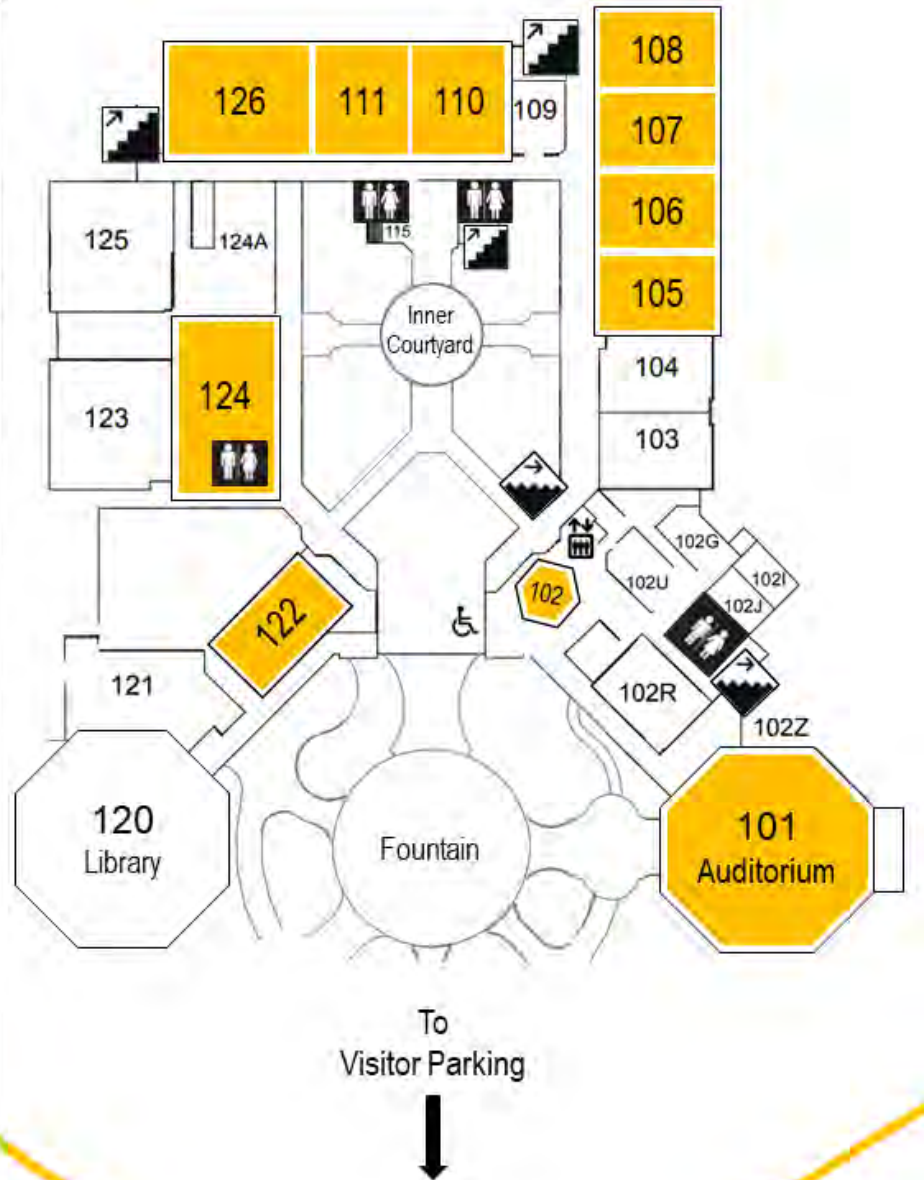

- **To Disney World:** 7.6 mi via I-4 W

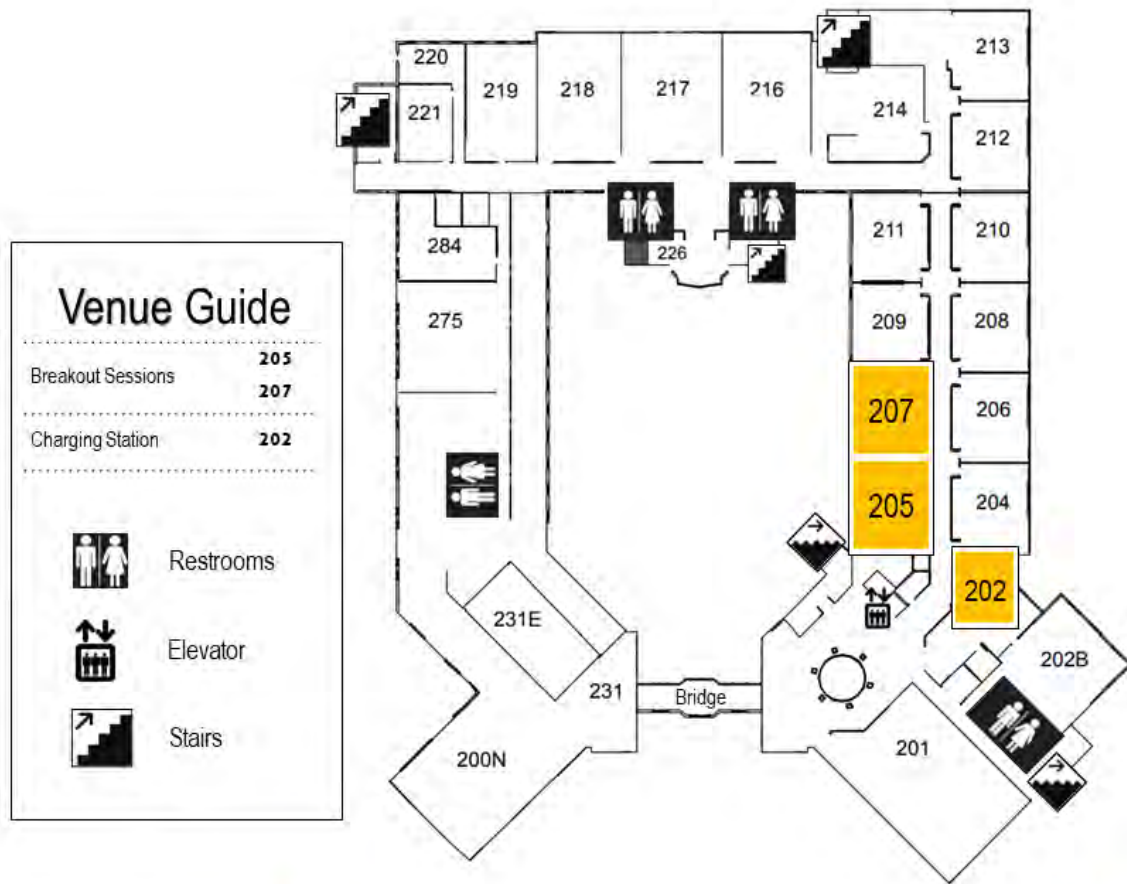

Disney World comprises four theme parks (Magic Kingdom, Epcot, Disney's Hollywood Studios, and Disney's Animal Kingdom), two water parks (Disney's Blizzard Beach and Disney's Typhoon Lagoon), and other entertainment venues, including the outdoor shopping center Disney Springs.

VENUE PLAN

in UCF Rosen College of Hospitality Management Campus

Venue Guide	
Keynote Sessions	101
Mini Symposia	101
Breakout Sessions	105 - 108 110 - 111
Registration	101 Lobby
Lunch	124
Welcoming Reception	126
IASCM Award Ceremony & 8WCSCM Banquet	124
Charging Station	122
Coffee Break	102

18:30 - 20:30	IASCM AWARD CEREMONY & 8WCSCM BANQUET Room 124								
JUNE 8 (WEDNESDAY)									
08:00 - 19:00	REGISTRATION OPEN Room 101 Lobby								
09:00 - 11:15	RS-12 Room 207	RS-01 Room 205	RS-20 Room 105	RS-28-2 Room 106	SS-15 Room 107	SS-04 Room 108	SS-14 Room 110		
11:15-11:30	COFFEE BREAK Room 102								
11:30-12:00	8WCSCM CLOSING CEREMONY Room 101								

Program by Sessions

JUNE 6 (MONDAY)				
KEYNOTE SESSION 1			TIME	LOCATION
KN 1-1			09:00:00-09:45:00	Room 101
Human Activity Recognition: Learning with Less Labels and Privacy Preservation				
Mubarak Shah (University of Central Florida)				
KN 1-2			09:45:00-10:30:00	Room 101
Smart and Resilient Extraterrestrial Habitats				
Shirley Dyke (Purdue University)				
KEYNOTE SESSION 2			TIME	LOCATION
KN 2-1			10:40:00-11:30:00	Room 101
The physics-based path to learning, monitoring and virtualizing dynamical systems				
Eleni Chatzi (ETH Zurich)				
KN 2-2			11:30:00-12:15:00	Room 101
Physics-informed machine learning and transfer learning for structural health monitoring and vibration control				
Yiqing Ni (The Hong Kong Polytechnic University)				
BREAKOUT SESSION A		TRACK	TIME	LOCATION
SS-13-1		1.1A	13:00:00 - 15:15:00	Room 207
Vibration-based Structural Health Monitoring and damage identification (Part I)				
(Maria Pina Limongelli, Kenneth J. Loh)				
SS-01-1		1.2A	13:00:00 - 15:15:00	Room 205
Harnessing Nonlinearities in Passive Control Systems (Part I)				
(Nicholas E. Wierschem, Zheng Lu)				
SS-06-1		1.3A	13:00:00 - 15:15:00	Room 105
New Advances in Enhanced Passive, Adaptive Passive, & Semi-active Vibration Control (Part I)				
(Chao Sun, Yan Zhang)				
SS-07-1		1.4A	13:00:00 - 15:15:00	Room 106
Computer vision and machine learning-based infrastructure monitoring and inspection (Part I)				
(Wei Song, Bill Spencer)				
RS-02		1.5A	13:00:00 - 15:15:00	Room 107
Structural Control of Bridges under Earthquake or Multiple Hazards				
(Mayuko Nishio, Baki OZTURK)				
RS-03		1.6A	13:00:00 - 15:15:00	Room 108
Seismic Isolation in Civil Engineering				
(Gaston Fermandois, Yaohua Yang)				
RS-04		1.7A	13:00:00 - 15:15:00	Room 110
Application and testing of new materials and techniques in semi-active vibration control				
(Patrick Sun, Sina Moosavi)				
RS-06		1.8A	13:00:00 - 15:15:00	Room 111
Wind Effects and Wind-Induced Vibration Control for Large-Scale Structures				
(Agathoklis Giaralis, Sunjoong Kim)				
BREAKOUT SESSION B		TRACK	TIME	LOCATION
SS-13-2		1.1B	15:30:00 - 18:00:00	Room 207
Vibration-based Structural Health Monitoring and damage identification (Part II)				
(Mustafa Gül, Arash Noshadravan)				
SS-01-2		1.2B	15:30:00 - 18:00:00	Room 205
Harnessing Nonlinearities in Passive Control Systems (Part II)				
(Jingjing Wang, Shujin Laima)				
SS-06-2		1.3B	15:30:00 - 18:00:00	Room 105
New Advances in Enhanced Passive, Adaptive Passive, & Semi-active Vibration Control (Part II)				
(Haifeng Wang, Amrit Verma)				
SS-07-2		1.4B	15:30:00 - 18:00:00	Room 106
Computer Vision and Machine Learning-based Infrastructure Monitoring and Inspection (Part II)				
(Dr. Jian Li, Yuequan BAO)				
RS-11		1.5B	15:30:00 - 18:00:00	Room 107
Recent Advances in Sensing Technology for Structural Health Monitoring				
(Jie Xu, Inad Alqurashi)				
RS-05		1.6B	15:30:00 - 18:00:00	Room 108
Flow Controls for Wind and Structural Engineering				
(Francesc Pozo, Dryver Huston)				
RS-14		1.7B	15:30:00 - 18:00:00	Room 110
Computer Vision-based Sensing and System Identification				
(Ho-Kyung Kim, Wei Song)				
RS-17		1.8B	15:30:00 - 18:00:00	Room 111
Bayesian Inference and Uncertainty Quantification in SHM: New Algorithms and Applications				
(Arash Noshadravan, Qiu Yu)				
MINI SYMPOSIUM 1			TIME	LOCATION
MS-1			13:00:00 - 14:30:00	Room 101
Building Research Careers in Structural Control and Monitoring				
(Panelists: Chuck Farrar, Mohammad Jahanshahi, Haeyoung Noh, Audrey Oliver Moderator: Hae-Bum "Andrew" Yun)				

JUNE 7 (TUESDAY)				
KEYNOTE SESSION 3			TIME	LOCATION
KN 3-1			09:00:00-09:45:00	Room 101
Active Thermography for Inspection, Monitoring and Control: From Technology Development to Commercialization				
Hoon Sohn (Korea Advanced Institute of Science and Technology (KAIST))				
KN 3-2			09:45:00-10:30:00	Room 101
The physical model of leak noise and leak detection of urban gas pipelines				
Jie Li (Tongji University)				
KEYNOTE SESSION 4			TIME	LOCATION
KN 4-1			10:40:00-11:30:00	Room 101
Digital Twins: The Next Phase of the AI Revolution?				
Mark Girolami (University of Cambridge)				
KN 4-2			11:30:00-12:15:00	Room 101
Development of scum geometrical monitoring beneath floating covers aided by UAV photogrammetry				
Wing Chiu (Monash University)				
BREAKOUT SESSION A		TRACK	TIME	LOCATION
RS-16		2.1A	13:00:00 - 15:15:00	Room 207
Structural Health Monitoring with Multi-Data				
(Wen Shen, Chul Min Yeum)				
RS-19		2.2A	13:00:00 - 15:15:00	Room 205
Uncertainty-Involved Structural Model Updating, Damage Assessment and Reliability Evaluation				
(Audrey Olivier, Marwan Debees)				
RS-26		2.3A	13:00:00 - 15:15:00	Room 105
Innovative Technologies for System Integration, SHM Application, and Structural Performance Assessment				
(Takehiko Asai, Matthew Bonney)				
RS-28-1		2.4A	13:00:00 - 15:15:00	Room 106
Application of Structural Health Monitoring techniques				
(Elham Eslami)				
SS-02		2.5A	13:00:00 - 15:15:00	Room 107
Incomplete-data-driven Structural Health Monitoring, Damage Detection, and Condition Assessment				
(Yang XU, Shiyang WEI)				
SS-09		2.6A	13:00:00 - 15:15:00	Room 108
Inspecting and Preserving Infrastructure through Robotic Exploration (INSPIRE)				
(Genda Chen, Yang Wang)				
SS-10		2.7A	13:00:00 - 15:15:00	Room 110
Intelligent Sensing Technology for Civil Infrastructures				
(He Zhang, Shunlong Li)				
SS-12		2.8A	13:00:00 - 15:15:00	Room 111
Structural Monitoring and Machine Learning in Wind Engineering: Wind and Wind Effects on Civil Structures				
(Teng Wu, Shanwu Li)				
BREAKOUT SESSION B		TRACK	TIME	LOCATION
RS-23		2.1B	15:30:00 - 18:00:00	Room 207
Monitoring-based Performance Assessment of Infrastructure				
(Enes Karaaslan, Furkan Luleci)				
RS-24		2.2B	15:30:00 - 18:00:00	Room 205
Monitoring-based Life Cycle Assessment of Infrastructures				
(Chinwendu Enyioha, Inad Alqurashi)				
RS-25		2.3B	15:30:00 - 18:00:00	Room 105
Monitoring-based Bridge Condition Assessment and Safety Warning				
(Wei LU, Mostafa Iraniparast)				
RS-32		2.4B	15:30:00 - 18:00:00	Room 106
Innovative Developments in Structural System Identification				
(Arthur Huang, Antonio Maria D'Altri)				
RS-09		2.5B	15:30:00 - 18:00:00	Room 107
Structural Monitoring and Control of High-speed Railway				
(Jian Li, Seyed Masoud Sajjadi Alehashem)				
RS-15		2.6B	15:30:00 - 18:00:00	Room 108
Computer Vision-based Structural Health Monitoring				
(Joe Kider, Mahta Zakaria)				
RS-22		2.7B	15:30:00 - 18:00:00	Room 110
Practical Estimation of Structural Displacement and Its Applications				
(Georgios Apostolakis, Sina Moosavi)				
SS-03		2.8B	15:30:00 - 18:00:00	Room 111
Advances in Computer Vision and Graphics for Structural Health Monitoring				
(Mohammad Jahanshahi, Hui Li)				
MINI SYMPOSIUM 2			TIME	LOCATION
MS-2			13:00:00 - 14:30:00	Room 101
Smart Cities and Smart Tourism				
(Panelists: Andrew Smyth, Therese McAllister, Mital Hall, Jeff Nenavides Moderator: Necati Catbas, Arthur Huang)				

JUNE 8 (WEDNESDAY)			
BREAKOUT SESSION A	TRACK	TIME	LOCATION
RS-12 Infrastructure Inspection Using Unmanned Aerial and Ground Vehicles (Jeffrey Kauffman, Chao Sun)	3.1A	09:00:00 - 11:15:00	Room 207
RS-01 New Development of Smart Devices for Structural Control (Lukasz Jankowski, Chih-shiuan Lin)	3.2A	09:00:00 - 11:15:00	Room 205
RS-20 Vehicle-Bridge Interaction and Its Applications in Bridge-Weigh-in-Motion (BWIM), Damage Detection, and Bridge Management (Robin Eunju Kim, Masoud Sanayei)	3.3A	09:00:00 - 11:15:00	Room 105
RS-28-2 Application of Structural Health Monitoring techniques (Patrick Sun)	3.4A	09:00:00 - 11:15:00	Room 106
SS-15 Artificial Intelligence Tools and Methods for Resilient Transportation (Mohamed Zaki, Zhibin Lin)	3.5A	09:00:00 - 11:15:00	Room 107

Human Activity Recognition: Learning with Less Labels and Privacy Preservation

Dr. Mubarak Shah

Center for Research in Computer Vision
University of Central Florida
U.S.A.

Date & Time: June 6 09:00 - 09:45

Abstract

Human activity recognition is one of the most active areas of research in Computer Vision. Due to deep learning tremendous progress has been made and several high-performance methods have been proposed. This extraordinary success of deep learning methods can be mostly attributed to advancements in supervised learning algorithms and the availability of large-scale labeled datasets. However, constructing large labeled datasets for supervised learning tends to be costly and is often infeasible.

In this talk, I will discuss our recent work on human activity recognition employing learning with less labels. In particular, I will present our work employing Semi-supervised learning (SSL), self-supervised learning and zero-shot learning. First, I will present our Uncertainty-aware Pseudo-label Selection (UPS) method for semi-supervised learning, where the goal is to leverage a large unlabeled dataset alongside a small, labeled dataset. Next, I will present self-supervised method, TCLR: Temporal Contrastive Learning for Video Representations, which does not require labeled data. Finally, I will present Pair-wise-Similarity Zero-shot Action Recognition (PS-ZAR) method, where the goal is to classify action classes which were not previously seen during training.

Advances in activity recognition have enabled a wide range of real-world applications, e.g. video surveillance camera, smart shopping systems like Amazon Go, elderly person monitor systems. Most of these video understanding applications involve extensive computation, for which a user needs to share the video data to the cloud computation server, where the user also ends up sharing the private visual information like gender, skin color, clothing, background objects etc. Therefore, there is a pressing need for solutions to privacy preserving action recognition. I will end this talk by briefly discuss our recently method SPAct: Self-supervised Privacy Preservation for Action Recognition.

Bio-sketch of Mubarak Shah

Dr. Mubarak Shah, the UCF Trustee Chair Professor, is the founding director of Center for Research in Computer Visions at University of Central Florida (UCF). Dr. Shah is a fellow of ACM, IEEE, NAI, IAPR, AAAS and SPIE; and a member of Academy of Science, Engineering and Medicine of Florida (ASEMFL). He has published extensively on topics related to visual surveillance, tracking, human activity and action recognition, object detection and categorization, shape from shading, geo registration, visual crowd analysis, etc. He has been ACM and IEEE Distinguished Visitor Program speaker and is often invited to present seminars, tutorials and invited talks all over the world. He is a recipient of ACM SIGMM Technical Achievement award; ACM SIGMM Test of Time Honorable Mention Award for his paper in Proceedings of the 14th ACM International Conference on Multimedia, MM 06; International Conference on Pattern Recognition (ICPR) 2020 Best Scientific Paper Award; IEEE Outstanding Engineering Educator Award; Harris Corporation Engineering Achievement Award; an honorable mention for the ICCV 2005 Where Am I? Challenge Problem; 2013 NGA Best Research Poster Presentation; 2nd place in Grand Challenge at the ACM Multimedia 2013 conference; and runner up for the best paper award in ACM Multimedia Conference in 2005 and 2010. At UCF he has received Pegasus Professor Award; University Distinguished Research Award; Faculty Excellence in Mentoring Doctoral Students; Scholarship of Teaching and Learning award; Teaching Incentive Program award;

Keynote Session 1 (Monday, June 6 08:55 - 10:30, Room 101)

Session Chair: Andrew W. Smyth (Columbia University, U.S.A.)

Smart and Resilient Extraterrestrial Habitats

Dr. Shirley Dyke

Professor of Mechanical Engineering and Civil Engineering
Purdue University,
U.S.A.

Date & Time: June 6 09:45 - 10:30

Abstract

The creation of safe and comfortable habitations is one of humankind's oldest activities. Millennia of trials have brought the design and operation of habitats on Earth to a high degree of sophistication. However, as we consider moving out into Space, new challenges related to these harsh and unknown environments will impede safety and thus, progress. Designing to withstand the demands that such extreme environments will place on long-term deep space habitats represents one of the greatest challenges in this undertaking, and is the main the know-how to establish deep space habitat systems that are smart and resilient. We define SmartHabs as habitats that have the ability to sense, anticipate, respond to, and learn from disruptions. Resilience requires that we first develop an understanding of the system architecture and features that are needed to support resilience in a space habitat system. However, system architecture alone is not sufficient, so we are working on techniques to extract the necessary amount of actionable information for repair and recovery through monitoring and embedded intelligence. The mission of the Resilient ExtraTerrestrial Habitats Institute (RETHi) is to provide situational awareness and autonomy to enable the design of habitats that are able to adapt, absorb and rapidly recover from expected and unexpected disruptions. Both fully virtual and coupled physical-virtual simulation capabilities are being established to enable us to explore a wide range of potential deep space SmartHab configurations and operating modes.

Bio-sketch of Shirley Dyke

Professor Shirley Dyke holds a joint appointment in Mechanical Engineering and Civil Engineering at Purdue University. She is the Director of Purdue's Intelligent Infrastructure Systems Lab and the Director of the NASA funded Resilient ExtraTerrestrial Habitat Institute. Dyke is the Editor-in-Chief of the journal Engineering Structures. Her research focuses on "intelligent" structures, and her innovations encompass structural health monitoring and machine learning for structural damage assessment and reconnaissance support. She holds a B.S. in Aeronautical and Astronautical Engineering from the University of Illinois, Champaign-Urbana in 1991 and a Ph.D. in Civil Engineering from the University of Notre Dame in 1996. She was awarded the Presidential Early Career Award for Scientists and Engineers from NSF (1998), the International Association on Structural Safety and Reliability Junior Research Award (2001) and the ANCRiSST Young Investigator Award (2006).

Keynote Session 2 (Monday, June 6 10:40 - 12:15, Room 101)

Session Chair: Richard Christenson (University of Connecticut, U.S.A.)

The physics-based path to learning, monitoring and virtualizing dynamical systems

Dr. Eleni Chatzi

Chair of Structural mechanics and Monitoring

Department of Civil, Environmental and Geomatic Engineering, ETH Zurich

Switzerland

Date & Time: June 6 10:45 - 11:30

Abstract

At the core of the engineering approach lies our ability to model on the basis of first principles. Drawing from physics principles it is possible to deliver approximations of engineering systems at diverse scales and resolutions, across time and space. In this talk, we discuss how to efficiently virtualize dynamical systems, by delivering digital approximations (twins) that compute fast and well approximate actual operating systems. Critical to this is the synergy of data, stemming from monitoring, with computationally affordable models that are powered from underlying principles of dynamics and mechanics. We demonstrate a hybrid approach, which can merge data with simulations, possibly in real-time. We demonstrate Reduced Order Modeling (ROM) schemes, which are coupled with estimators, such as Bayesian filtering, for virtual sensing of dynamical systems. We lastly augment the knowledge that our approximations of physics can afford via use of physics-informed deep learning strategies that integrate models and data for enhanced learning and predictive data-driven modeling.

Bio-sketch of Eleni Chatzi

Eleni Chatzi received her PhD (2010) from the Department of Civil Engineering and Engineering Mechanics at Columbia University, New York. She is currently an Associate Professor and Chair of Structural Mechanics and Monitoring at the Institute of Structural Engineering of the Department of Civil, Environmental and Geomatic Engineering of ETH Zürich. Her research interests include the fields of Structural Health Monitoring (SHM) and structural dynamics, nonlinear system identification, and intelligent life-cycle assessment for engineered systems. She is an author of over 280 papers in peer-reviewed journals and conference proceedings, and further serves as an editor for international journals in the domains of Dynamics and SHM, including the Journal of Sound and Vibration, Structure & Infrastructure Engineering, the Journal of Structural Engineering, Mechanical Systems and Signal Processing, the Journal of Engineering Mechanics, as well as the Sections on Structural Sensing and Computational Methods in Structural Engineering of Frontiers in Built Environment. She led the recently completed ERC Starting Grant WINDMIL on the topic of "Smart Monitoring, Inspection and Life-Cycle Assessment of Wind Turbines". Her work in the domain of self-aware infrastructure was recognized with the 2020 Walter L. Huber Research prize, awarded by the American Society of Civil Engineers (ASCE). She is further recipient of the 2020 EASD Junior Research Prize in the area of Computational Structural Dynamics.

Keynote Session 2 (Monday, June 6 10:40 - 12:15, Room 101)

Session Chair: Richard Christenson (University of Connecticut, U.S.A.)

KN 2-2

Physics-informed machine learning and transfer learning for structural health monitoring and vibration control**Dr. Yi-Qing Ni**Chair Professor of Smart Structures and Rail Transit, Department of Civil and Environmental Engineering, The Hong Kong Polytechnic University
China**Date & Time:** June 6 11:30 - 12:15**Abstract**

In the past decade, we have witnessed explosive developments and applications of machine learning (mainly deep neural networks) in various science and engineering fields, including its applications in structural health monitoring and vibration control. Deep neural network models can be trained with powerful nonlinear function approximation capability with aid of rich data which are usually experimental (monitoring) or simulation results. However, when applying data-hungry deep neural networks to structural health monitoring and vibration control problems, obtaining labeled training data with regard to various damage scenarios or excitation conditions is often impractical or prohibitively expensive. The recent years have seen a revolution in deep learning with the advent of physics-informed neural networks (PINNs) for the forward and inverse problems of physical systems characterized by ordinary or partial differential equations (ODEs/PDEs), using small amounts of data or even no data. The PINNs encode the physical laws (in terms of ODEs/PDEs and their boundary/initial conditions) and prior physical knowledge into deep neural networks, so that the underlying physics can be embedded while alleviating the need for supervised learning using large amounts of labeled data. Moreover, PINNs provide a desirable platform for synergy with transfer learning to leverage the knowledge from physics and from observations and the information from multi-fidelity data. This presentation will elucidate the applications of PINNs in conjunction with transfer learning in the field of structural health monitoring and vibration control, and discuss some current bottlenecks and future research directions.

Bio-sketch of Yi-Qing Ni

Dr. Yi-Qing Ni is Yim, Mak, Kwok & Chung Professor in Smart Structures, Chair Professor of Smart Structures and Rail Transit at Department of Civil and Environmental Engineering, The Hong Kong Polytechnic University, Hong Kong. He is the Director of the National Engineering Research Center on Rail Transit Electrification and Automation (Hong Kong Branch). He has published more than 250 SCI journal papers indexed in Web of Science Core Collection and over 330 conference papers. His publications receive an H-index of 45 and more than 7,000 citations in Web of Science Core Collection, and receive an H-index of 59 and over 13,000 citations in Google Scholar. He is a Co-Editor-in-Chief for Journal of Infrastructure Intelligence and Resilience (Publisher: Elsevier) and Intelligent Transportation Infrastructure (Publisher: Oxford University Press), and serves as an associate editor or editorial board member for ten journals, including Engineering Structures, Structural Control and Health Monitoring, Smart Structures and Systems, Journal of Civil Structural Health Monitoring, Journal of Vibration and Control, Structural Monitoring and Maintenance.

Active Thermography for Inspection, Monitoring and Control: From Technology Development to Commercialization

Dr. Hoon Sohn

Professor of Civil and Environmental Engineering
Korea Advanced Institute of Science and Technology (KAIST)
Republic of Korea

Date & Time: June 7 09:00 - 09:45

Abstract:

In this presentation, an active thermography system is developed for automated, noncontact, and nondestructive inspection, monitoring and control of various engineering structures. The developed system uses a laser beam or halogen lamp to heat up the target structure, and the corresponding electromagnetic radiation is measured using an infrared camera. Several real-world applications of the developed active thermography system is showcased in the presentation. First, the coating thickness and surface defects, such as corrosion, delamination, checking and chalking, of painted steel structures are visualized, classified and quantified using the active thermography system and machine learning. The active thermography system is also integrated with a drone or unmanned vehicle for automated inspection of bridges, pipelines, and ships. Other applications include online monitoring and process control during metal 3D printing and in-line inspection of electronic car batteries.

Bio-sketch of Hoon Sohn

Hoon Sohn is Professor at KAIST (Korea Advanced Institute of Science and Technology), and the Director of 3D Printing Nondestructive Testing Center sponsored by the National Research Foundation of Korea. Over last twenty-five years, his research interest has been in the areas of structural health monitoring, nondestructive testing, sensing technologies and data analytics. He has published over 200 refereed journal articles, over 390 conference proceedings, and 11 book & book chapters. He is holding 44 domestic and 16 international patents, and his developed technologies are licensed and commercialized by private companies. He is currently SPIE Fellow, Member of National Academy of Engineering of Korea (NAEK), and Member of Korean Academy of Science and Technology (KAST).

KN 3-2

The physical model of leak noise and leak detection of urban gas pipelines

Dr. Jie Li

Chair Professor of Tongji University, Academician of the Chinese Academy of Science
Civil Engineering School, Tongji University
China

Date & Time: June 7 09:45 - 10:30

Abstract

Gas supply system is an essential component of modern urban infrastructural systems. Due to factors such as corrosion, mechanical or material failure, leakage of gas pipelines may lead to significant economic and energy losses. This lecture introduces a new acoustic-based method developed for leak detection as well as the leakage location for gas pipelines. The method is established on the physical model of leak noise. The model takes into account the effects of pipe pressure, pipe diameter, leak size as well as material parameters of the pipe and the gas. An machine learning method is proposed based on the physical model and statistical features of leak noise, and is applied to the leak detection of gas pipelines. Meanwhile, a physical leakage location model is developed which can be used for finding the leakage position and to determine the maximum distance of deployment location of sensors. On these basis, a model-based location technique is suggested and some application example is introduced. The new technology may offer a kind of real-time monitoring system for the maintenance of urban gas supply networks.

Bio-sketch of Jie Li

Prof. Jie Li received Ph.D. in Structural Engineering from Tongji University, China in 1988, and received an honorary doctorate in engineering science from Aalborg University, Denmark in 2013. He has been devoted to the research on structural engineering and stochastic mechanics over 35 years. His contributions are distributed in the area of stochastic dynamics, damage mechanics, engineering reliability and lifeline systems. Prof. Li is the author of six monographs and more than 400 peer reviewed journal papers. In 2014, Prof. Li was awarded the Alfred M. Freudenthal Medal by ASCE, owing to his academic achievements in the probability density evolution method and in the seismic reliability based design of large-scale infrastructure systems. Prof. Li currently serves as the president of International Association for Structural Safety and Reliability (IASSAR), a member of the director board of International Conference of Damage Mechanics (ICDM), and the Fellow of Engineering Mechanics Institute (EMI).

Digital Twins: The Next Phase of the AI Revolution?

Dr. Mark Girolami

Sir Kirby Laing Professor of Civil Engineering

Royal Academy of Engineering Research Chair in Data Centric Engineering, University of Cambridge

United Kingdom

Date & Time: June 7 10:45 - 11:30

Abstract

The idea of an Intelligent Digital Avatar conjures up many images from a complete virtual world that one can safely define, develop and play in to rogue robots running amok and destroying mankind. The reality is much less dramatic but no less far reaching and exciting. This talk will discuss Digital Twins and chart their history to present day technological capability and present some of the advances being made and the opportunities along with the open challenges faced to realise the potential of Digital Twins.

Bio-sketch of Mark Girolami

Mark Girolami is the Chief Scientist of The Alan Turing Institute and took up this role from October 2021. Previous to his role as Chief Scientist he led The Alan Turing Institute-Lloyds Register Foundation programme in data-centric engineering which launched a whole new discipline that has global reach and influence.

Under his leadership, the data-centric engineering programme (DCE) grew from an initial grant to a multi-million pound global research and innovation enterprise that saw the delivery of a number of 'world-firsts' including the world's first self-sensing 3D printed stainless steel pedestrian bridge in Amsterdam; sustainable and more efficient underground agriculture; advanced AI enabled city scale air quality monitoring systems; the city level monitoring of social distancing and activity assessment in guiding London through the COVID-19 pandemic; the development of an AI enabled UK Air Traffic Control Service, and digital twin technologies in rail transportation and aerospace design, amongst many others.

The launch of the international Data-Centric Engineering journal by Cambridge University Press firmly established DCE as a new emerging discipline of global importance. Mark was also the driving force behind the first-ever DCEng Summit in September 2021. The event attracted international expert speakers from countries around the globe and represented a landmark moment in the growth of the discipline. In 2019 Mark Girolami was elected to the Sir Kirby Laing Professorship of Civil Engineering within the Department of Engineering at the University of Cambridge where he also holds the Royal Academy of Engineering Research Chair in Data Centric Engineering. He took up the Sir Kirby Laing Chair upon the retirement of Professor Lord Robert Mair. Prior to joining the University of Cambridge Professor Girolami held the Chair of Statistics in the Department of Mathematics at Imperial College London.

He was an EPSRC Established Career Research Fellow (2012-2018), an EPSRC Advanced Research Fellow (2007-2012), was a recipient of a Royal Society Wolfson Research Merit Award, and in 2011 was elected to the Fellowship of the Royal Society of Edinburgh.

KN 4-2

Development of scum geometrical monitoring beneath floating covers aided by UAV photogrammetry

Dr. Wing Kong Chiu

Professor of Mechanical and Aerospace Engineering
Monash University
Australia

Date & Time: June 7 11:30 - 12:15

Abstract

Floating covers are used on anaerobic lagoons at waste-water treatment plants for odour control and the harvesting of biogas. Scum is an unwanted by-product of the anaerobic digestion of raw sewage. This matter can form into a large mass of material, and when it floats to the surface and solidifies, it is called a scumberg to differentiate it from the scum which may still be in a semi-solid state. Given the continual inflow of raw sewage into the lagoon, the potential movement of the scum can deform the floating cover. One of the challenges pertaining to the structural health assessment of the floating cover hinges upon the difficulty in monitoring the development and geometrical profile of scum underneath the cover. The current measurement of scum requires the inspector to physically access the scum either from multiple discrete access ports within the floating cover or by using highly-skilled divers in the lagoon. In collaboration with Melbourne Water Corporation, a non-contact UAV-aided photogrammetry technique has been deployed to quantify the development of scum underneath the cover. It is shown that the digital elevation model obtained from photogrammetry correlates well with direct laser-based measurements of elevation, and that cluster analysis can be used in conjunction with the digital elevation model to estimate the qualitative hardness level of the scum beneath the cover, thereby providing a viable alternative to time-consuming walk the cover type inspections. It is also shown that the total scum depth as predicted from the digital elevation model correlates well with the measurements taken through the access ports. This method could be a safe and cost-effective alternative to current practice.

Bio-sketch of Wing Kong Chiu

Professor Chiu is a member of academic staff at the Department of Mechanical & Aerospace Engineering at Monash University, Australia. He is an internationally recognised researcher in structural health monitoring and his work spans across aerospace (aircraft structures), civil (pipelines and large membrane floating covers), rail (integrity assessment of tracks) and mechanical (rotating equipment) engineering. Chiu has extended his knowledge in structural health monitoring to the medical area and has developed strong collaboration with researchers and surgeons from The National Trauma Research Institute. He is currently collaborating with Professor Fitzgerald on numerous projects. Apart from securing research funding, they have jointly filed two patents. He is co-chairing the 9th Asia-Pacific Workshop on Structural Health Monitoring in Cairns, Australia in 2022. This workshop is now widely recognised as the 3rd leg in the global workshop on structural health monitoring. With the International Workshop on Structural Health Monitoring and the European Workshop on Structural Health Monitoring being the 1st and the 2nd leg respectively. Chiu is a member of the International Organising Committee of the International Workshop on Structural Health Monitoring (held biennially at Stanford University).

8WCSCM

Mini- Symposia

Mini Symposium, MS-1 (Monday, June 6 13:00 - 14:30, Auditorium Room 101)

Synopsis: This mini symposium aims to provide opportunities to (i) get guidance on how to navigate through the first few years of academic and research career, (ii) share experience and wisdom of pursuing academic and research career paths, and (iii) network with peers and experts in structural control and monitoring fields, form mentor-mentee relationships. This symposium is specially to help junior members of our community, including graduate students, postdocs, and early-career faculty. Topics include but are not limited to advice for career paths (universities, national labs, government & industry) for those at different career levels (graduates, postdocs & junior faculty), emerging research trends and topics, job preparation and application tips, relationships with advisors and colleagues, and diversity and inclusion. Our panelists consist of field experts at various stages in academia and national laboratories. They will share their useful career experiences and insights through short presentations followed by a Q&A session. To provide opportunities to have in-depth discussions on specific topics, we will hold small group sessions for in-person attendees and Zoom breakout rooms for virtual attendees. We hope this symposium will provide opportunities for people to meet and better understand and nurture our community.

(* Small group sessions will be held at different time slots by region considering local time of participating mentors and mentees. Small groups schedule is to be posted on the 8WCSCM website.

Panelists:

- **Dr. Chuck Farrar**, Engineering Institute Leader of National Security Education Center, Los Alamos National Laboratory, U.S.A.
- **Dr. Mohammad Jahanshahi**, Associate Professor of Civil Engineering, Purdue University, U.S.A.
- **Dr. Haeyoung Noh**, Associate Professor of Civil and Environmental Engineering, Stanford University, U.S.A.
- **Dr. Audrey Olivier**, Assistant Professor of Civil Engineering, University of Southern California, U.S.A.

Moderator:

- **Dr. Hae-Bum (Andrew) Yun**, Associate Professor of Civil Engineering, University of Central Florida, U.S.A.

Mentors in Small Group Sessions:

- **ZhiQiang Chen**, Associate Professor, School of Computing and Engineering, University of Missouri-Kansas City, U.S.A.
- **Mustafa Gul**, Associate Professor of Civil and Environmental Engineering, University of Alberta, Canada
- **Meidani Hadi**, Associate Professor of Civil and Environmental Engineering, University of Illinois at Urbana-Champaign, U.S.A.
- **Erik Johnson**, Professor of Civil and Environmental Engineering, University of Southern California, U.S.A.
- **Chul-Woo Kim**, Professor of Civil & Earth Resource Engineering, Kyoto University, Japan
- **Robin Eunju Kim**, Assistant Professor of Civil & Environmental Engineering, Hanyang University, South Korea
- **Jun Li**, Associate Professor, Civil and Mechanical Engineering, Curtin University, Australia
- **Audrey Olivier**, Assistant Professor of Civil Engineering, University of Southern California, U.S.A.
- **David Wagg**, Professor of Mechanical Engineering, University of Sheffield, U.K.
- **Yongchao Yang**, Assistant Professor of Mechanical Engineering, Michigan Technological University, U.S.A.

Mini Symposium, MS-2 (Tuesday, June 7 13:00 - 14:30, Auditorium Room 101)

Synopsis: Smart Cities are interconnected complex systems including components such as people, built environment, operations, economic and social-organizational aspects. Smart cities will combine sensing, communications, and management technologies to create urban environments that are adaptable, connected, able to be monitored at any given time and focused on the achievement of a specific set of objectives. As technology continues to transform the infrastructure sector, artificial intelligence, sensing, the Internet of Things, and various in-sight era technologies provide emergent opportunities for smart cities to improve quality of lives of people, improve efficiency in operations and contribute to “green communities”. New generation of smart cities can take advantage of such developments while recognizing that natural, technological, and human-caused hazards, pandemics can take a high toll on communities, costing in lives, livelihoods and quality of life if such disaster risks are not considered and managed. Some of the major cities such as New York, Las Vegas, Orlando in the USA also receive large number of visitors/tourists contributing greatly to local and state economies. Tourism businesses may need to prepare challenges such revisioning, leading, coordinating, and planning tourism destinations for destination marketing and management organizations in a smart city. Therefore, smart tourism is a part of the interconnected smart city system.

Given the abovementioned challenges, how should different stakeholders for such cities address these complex systems issues? What and how emergent technologies could facilitate the transition towards a resilient, economically and socially vibrant smart city with smart tourism? The Smart Cities and Smart Tourism Mini-symposium will gather experts with backgrounds in built infrastructure, novel technologies, tourism industry to discuss the opportunities challenges of smart city and smart tourism development and unpack existing technological trends and advances. The expert panelist listed below will bring their own perspectives to Smart City concepts and implementations especially considering major cities have to consider smart tourism as an integral part of the economy, people, and operations along with built environment and advanced technologies.

Panelists (tentative):

- **Dr. Andrew Smyth**, Professor of Civil Engineering & Chair of the Smart Cities Center, Columbia University, U.S.A.
- **Dr. Therese McAllister**, Community Resilience Group Leader, National Institute of Standards and Technology (NIST), U.S.A.
- **Ms. Mital Hall**, PMP, LEEd AB O+M, CC-P, Vice President, ecoPreserve Inc., U.S.A.
- **Mr. Jeff Benavides** Chief Sustainability & Resilience Officer at Orange County, Orange County, Florida, U.S.A.

Moderators:

- **Dr. Arthur Huang**, Assistant Professor, Rosen College of Hospitality Management, University of Central Florida
- **Dr. Necati Catbas**, Professor, College of Engineering and Computer Science, University of Central Florida

BBM Structural Engineers, Inc. was incorporated in 1984 and is currently celebrating 38 years in business. The firm employs 28 professionals in two offices: Orlando (23 employees) and Boca Raton, FL (5 employees).

Employee breakdown includes 7 licensed professional engineers, 5 engineering interns, 11 CAD / BIM technicians, 2 construction administration personnel and 3 administrative people. With over 100 years of combined experience among our principals, BBM is a leader in structural engineering consulting, delivering over 7,000 projects total across a variety of industries and located in more than 44 states and territories. Our solutions are versatile, efficient and creative, as we continually strive to be at the leading edge of structural engineering practice.

BBM has used Revit, by Autodesk since 2007. Revit is the frontrunner in Building Information Technology (BIM) and when utilized by architects and engineering consultants, a uniform and coordinated model results where any conflicts between the disciplines are able to be readily recognized and solved. In addition, during the construction phase, the CM is able to coordinate various trades using the 3-D model to minimize field challenges and / or identify conditions that must be addressed prior to construction being completed in those areas. Our engineers use the following industry standard, sophisticated structural analysis / design software: RAM Structural System, RAM Elements, RAM Concepts, Tekla Structural Designer, and TEDDS.

BBM's engineers are registered in 44 states: Alabama, Arizona (SE), Arkansas, California, Colorado, Connecticut, Delaware, Florida, Georgia, Hawaii (SE), Idaho (SE), Illinois (SE), Indiana, Iowa, Kansas, Kentucky, Louisiana (SE), Maine, Maryland, Massachusetts, Michigan, Mississippi, Missouri, Nebraska (SE), Nevada (SE), New Hampshire, New Jersey, New Mexico, New York, North Carolina, Ohio, Oklahoma, Oregon (SE), Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington (SE), West Virginia, and Wyoming; and 3 territories: Guam (SE), Puerto Rico, and the United States Virgin Islands. Principals Bora Erbilien, Luis Bedoya, and Kevin Casey hold national NCEES registration.

In addition, Bora Erbilien and Kevin Casey were named Fellows of the Structural Engineering Institute (SEI) and both earned their Fellowship of the SEI of the American Society of Civil Engineers (ASCE). Kevin is also designated as a Chartered Member (MIStructE) in the institution of Structural Engineers based in the UK. Bora Erbilien also holds NCEES 'Model Law Structural Engineer' designation and is a registered engineer in Grenada.

RIEGL is an international leading provider of cutting-edge technology in airborne, mobile, terrestrial, industrial, and unmanned laser scanning solutions for applications in surveying.

RIEGL has been producing LiDAR systems commercially for over 40 years and focuses on pulsed time-of-flight laser radar technology in multiple wavelengths.

RIEGL's core Smart-Waveform technologies provide pure digital LiDAR signal processing, unique methodologies for resolving range ambiguities, multiple targets per laser shots, optimum distribution of measurements, calibrated amplitudes, and reflectance estimates, as well as the seamless integration and calibration of systems.

RIEGL's Ultimate LiDARTM 3D scanners offer a wide array of performance characteristics and serve as a platform for continuing Innovation in 3D for the LiDAR industry.

From the first inquiry, to purchase and integration of the system, as well as training and support, RIEGL maintains an outstanding history of reliability and support to their customers.

Worldwide sales, training, support, and services are delivered from RIEGL's headquarters in Austria and in the USA; main offices in, Japan, China, Australia, Canada, and the UK; and a worldwide network of representatives.

OTR is a mobile application striving to bring communities together and make driving a better experience for everyone. This solution will provide a hands-free reporting system with which users can report any inconveniences on the road and get rewarded for doing so!

These reports will then be sent to the correct authorities so that they can properly respond to the issues in a timely and effective manner. Common road sightings such as potholes, uneven surfaces, and roadkill are a nuisance to all drivers, so let's work together to fix them. Additionally, we'd like to add features such as customization in route planning and updates about your route before you start driving. We'd love to hear your feedback!
